

# STARLINK TOKEN WHITEPAPER

Starlink Token is a brand new Binance Smart Chain Token that generates profit maximization, DeFi and Crypto revenue Systems. Starlink Token has created a mechanism that bridges between our products and our goals through progressive auto-burning system.

# Synopsis

---

## 1-DeFi Antecedents

Decentralized Finance (DeFi) refers to financial applications built on the blockchain ecosystem. Its common goal is to develop and operate in a decentralized environment, without any intermediaries. According to the data from the DeFi Pulse, the amount of money invested in DeFi projects skyrocketed from about \$950 million in late May 2020 to more than \$9.5 billion by the first week of September of the same year, and has been allocated (locked) to provide decentralized trading ,staking ,liquidity Various DeFi applications for liquidity mining, lending and borrowing, monetary banking(such as issuing the stable coin)tokenization , or other financial instruments such as derivatives markets. In this intension, Defi is about creating a network of financial services without any intermediaries that could potentially have unfair systems.

Anyhow, cryptocurrency and DeFi is a new concept, coupled with the extreme complexity and immaturity of the propose tools, making it confusing and risky for the community to engage which preventing it from becoming the mainstream. In early 2021, we can' t call this financial architecture "open finance" – when new users have to pass through the hard annulation to join in. So, this needs to be done in order to simplify the interface that democratizes DeFi and makes it accessibility to a larger audience.

## 2-Crypto Faucets Antecedents

Crypto faucets are apps or websites that distribute small amounts of cryptocurrency as a reward for completing simple tasks. In case of crypto faucets, tiny amounts of free or earned cryptocurrency are sent to each user's wallet. Users need to complete simple tasks such as viewing ads, watching product videos, completing quizzes and surveys, clicking on links, or completing a verification code to get free encryption.

Despite the the faucet performance of cryptocurrencies over the past few years, they have yet to fully go mainstream and are still new to most people. The idea behind the cryptocurrency for fee to people so that they take the time to learn about digital assets and hopefully invest in cryptocurrency.

# Synopsis

---

## 3-Next Generation Cryptocurrency Faucet

Usually, users need to register at a cryptocurrency faucet, which will enter their details along the wallet address. On this site you get paid by solving a task, and the pay goes to a micro wallet: similar to a traditional wallet, but you can collect trace amounts to gain large amount of crypto assets by using off-chain mechanisms. This way you can avoid blockchain network fees as API endpoint to perform microtransactions. Micro wallets can be used to collect trace amounts of high-fee coins, so the minimum withdrawal limits are necessary, from cryptocurrencies Faucet withdrawals also reduce fees. These are the reasons for some cryptocurrency faucets opting for an internal wallet that allows users to withdraw funds directly to the blockchain. It is the final automatic statement of the case.

## 4-Binance Smart Chain: The Bridge Between DeFi and Crypto Faucets

Binance Smart Chain has emerged to leader among the Ethereum rivals due to its fully functional network with high scalability, considerably low transaction fees and a second block era.

Binance Smart Chain is the second blockchain launched by the cryptocurrency exchange Binance. The first Binance Blockchain (Binance Chain) lacks most of the functionality and flexibility which Ethereum have, while Binance Smart Chain is compatible with the Ethereum Virtual Machine (EVM) and supports smart contracts. Therefore, developers can launch their Ethereum DApps on Binance Smart Chain with minimal configuration, allowing many crypto projects to quickly migrate to the latter avoiding the high transaction fees of ETH.

Binance Smart Chain has enjoyed great popularity since early 2021, largely due to congestion issues and high transaction fees on the Ethereum network. All of this has led many developers and investors to seek alternatives such as BSC.

In February 2021, the BSC community made the network more attractive to new users as a low-cost and stable alternative, by reducing its gas fee from 15 Gwei to 10 Gwei. This is to offset the sharp rise in the price of Binance Coin (BNB), which surpassed \$300 in February 2021.

# Synopsis

---

This is why Binance Smart Chain is actually a good way:

For Crypto Faucets Users : to have an understanding Dapps mechanisms and gain access to DeFi opportunities without paying high fee.

For Crypto Faucets Owners : to take a step towards decentralization.

Starlink Token (STARLINK) is the very first token who permits users to learn about DeFi while receiving Bonuses on a crypto faucet like Final Auto claim.

# Synopsis

---

## 5-Towards a cross-chain environment

Smartchain Binance is a great way to introduce people to deFi, but the cost is still relatively high, especially when making micropayments, which is the case for crypto faucets and all semi-centralized micro-revenue crypto services.

If we want to completely get rid of the centralized systems (mySQL, RESTful API, etc.) in the world of micropayments, we need a blockchain that is almost fully and instantly capable of executing transactions, at a lower cost.

In addition, the cross-chain environment of minimally invasive services can bring a lot of

Simple for the user, especially when the service offers many crypto tokens to earn, it avoids having to enter many addresses to withdraw his funds. For example, a user will only have to enter his Binance Smart Chain (or Tron, Ethereum, Polygon..) address and will be able to make all withdrawals on it instead of

Local DOGE, BTC and ETH network addresses must be entered.

Starlink Token will be available on different blockchains in the future to allow third parties to find the best technology for their business and improve Crypto Faucet users experience by allowing all cryptocurrencies to be transferred to one or two public address(es) .

# Utility Cases

---

## STARLINK as an official Final Auto claim's Utility Token.

Final Auto claim is a famous cryptocurrency earning site that allows users to earn up to 50 different cryptocurrencies. With approximately 300,000 members, Final Auto claim offers many Different ways to earn cryptocurrencies including surveys, staking, app installs and Video to watch.

Many Starlink use cases will be implemented into Final Auto claim in the future.

Final Auto claim's link : <https://autofaucet.dutchycorp.Starlink>

## Available Features

Auto claim reward bonus for each Starlink Token on-chain (from 2% to 100%)

Holders Staking rewards for each Starlink Token on-chain (from 0.5% to 20%)

Holders Roll Game reward bonus for Starlink-BNB LP token (from 2% to 100%)

For Starlink-BNB LP tokens holder provide offers and survey reward bonuses  
(from 0.5% to 20%)

# Utility Cases

---

## Features Roadmap

- Marketing drives the propagating awareness
- Launching the Website
- Launching the Starlink
- Having 5000 Telegram Members
- Auditing by the third-party

# Utility Cases

---

## STARLINK Liquidity Mining

As a liquidity provider, as long as you have cryptocurrency added to the liquidity pool when there is a Starlink token trading on the blockchain network, you will receive the corresponding Starlink token as a return.

Yield tokens are added to the liquidity pool and distributed proportionally to all current liquidity providers. Since the liquidity pool enables Starlink tokens to be traded in real-time on the blockchain, anyone can become a liquidity provider, as long as they can provide equivalent WBNB/BNB, they can add Starlink contract liquidity on the PancakeSwap chain.

# Tokenomics

Initial Supply*	100,000,000,000	Starlink
Liquidity	97,000,000,000	Starlink
Community Airdrop	3,000,000,000	Starlink

# Starlink Token Mechanisms

---

## Purchasing Fees

- 5% added LP liquidity Automatically.
- 2% the only source for marketing costs of project party.
- 1% is burned for the token deflation.

## Selling Fees

- 8% added LP liquidity Automatically
- 2% the only source for marketing costs of project party
- 1% is burned for the token deflation

# Milestones

---

Finished the 1st Airdrop

Having 2000 Twitter and Telegram Members

Integration to Final  
Auto claim and Holders  
Bonuses

More Radical Marketing

More Tutorials on  
Medium

Listing on  
CoinMarketCap and  
P2PB2B

# Roadmap

---

## 1- Short Term Roadmap

Marketing Drive the propagating Awareness

5000 Telegram Members

Lunching the Website

Superstar outreach effort

Influencer drive marketing

Listing on CG & CMC

# Roadmap

## 2- Long Term Roadmap

**February 2022**

Token and Website  
Launch

**June 2022**

15,000 token holders

**January 2023**

Auditing by the third  
party

**End 2023**

- 80,000 token holders
- Launch Starlink Swap
- Launch NFT market, NFT collecting

**April 2022**

- 5000 token holders
- Listing on the CG and CMC

**October 2022**

Influencer drive the marketing

**July 2023**

- 30,000 telegram Members
- 50,000 token holders2
